Green Books

Green Books are CIGRE’s flagship reference publications

These publications bring together multiple Technical Brochures into one definitive publication.

Green Books are CIGRE's state of the art, flagship reference publications. CIGRE aims to produce the very best, most comprehensive set of reference publications encompassing all the subjects covered by CIGRE and its Study Committees. Green Books consolidate, in a single book, all the CIGRE knowledge in a domain of work i.e. all the existing Technical Brochures, reorganised and carefully compiled.

Green Books are recognised by the engineering community as the top reference publications in their fields. As at May 2025 these definitive publications have been accepted by SCOPUS for indexing. This will provide extensive reference and citation opportunities for the educatio sector.
