Editorial	
Improved generator performance with a nanocomposite high voltage insulation system for stator windings – A status report	5
Evaluation of the thermal performance of transformer windings by numerical investigations and measurements	15
Arresters with advanced cooling performance for protection of valves in HVDC converters	23
Development of the riser cable system for offshore floating wind power project	32
Calculation accuracy of high-temperature sag for ACSR in existing lines	39
Current situation and recent challenges in asset management of aging T&D substation facilities in Japan	49
Brazilian experience regarding interactions between series capacitors and svcs – Main challenges of Tucuruí-Macapá-Manaus interconnection project	55
Operating experience with and future challenges for coordinating power plant and power system protection	63
Managing regional security of supply: a case study from Scotland	81
Operational security challenges and tools for a synchronous power system with high penetration of non-conventional sources	91
Reduction of greenhouse gases in GIS pilot project in UK	102
Amplification of harmonic background distortion in wind power plants with long high voltage connections	109
Capacity mechanisms: Results from a world wide survey	117
An adaptive protection infrastructure for modern distribution grids with distributed generation	125
Solid-gas insulation in HVDC gas-insulated system: Measurement, modeling and experimental validation for reliable operation	133
Classification of customers based on temporal load profile patterns	143
Using the flow-based method for network investments' evaluation – a new concept	149
