

Contents of this issue

	page
Editorial	4
Editorial Board	5
Utilizing smart meter data for electricity fraud detection	8
International industry practice on modelling and dynamic performance of inverter based generation in power system studies	25
Contribution of nonsynchronous generation to bulk system frequency response	38
The potential of low load diesel application in increasing renewable energy source penetration	49
Implementation of a flywheel energy storage system to improve the integration of wind power generation in microgrids	60
Transmission system stability assessment within an integrated grid development process	67
The expected impact of four major changes in the grid on the power quality – a review	85
Demonstration of active compensation of unbalanced magnetic pull in synchronous machines	98
Transformer cores of mixed materials in limbs and yokes	108
Predictive modelling of overhead lines reliability and risk-based inspection policies	116
Magnetic field of the bipolar hvdc cable Italy-Montenegro in the sea and in the land section	123
European network codes - Bidding zone review Impacts on the SEE region resulting from a Austrian-German market Split	131
Probabilistic power flow for the transmission system expansion planning considering distributed generation variability	138
