

Green Books

Green Books are CIGRE's flagship reference publications

These publications bring together multiple Technical Brochures into one definitive publication.

Green Books are CIGRE's state of the art, flagship reference publications. CIGRE aims to produce the very best, most comprehensive set of reference publications encompassing all the subjects covered by CIGRE and its Study Committees. Green Books consolidate, in a single book, all the CIGRE knowledge in a domain of work i.e. all the existing Technical Brochures, reorganised and carefully compiled.

Green Books are recognised by the engineering community as the top reference publications in their fields. The first two books of the series, Overhead Lines (Study Committee B2) and Accessories for Extruded HV Cables (Study Committee B1) are available for purchase on e-cigre.org.
