

# The Electric Power System

**- Austria -**

*version 10<sup>th</sup> July 2018*

## Basic facts Austria

- Area: 83,850 km<sup>2</sup>
- Population: 8,8 Mio
- Number of TSOs: 2
- Number of DSOs: 122
- Peak load: 10,4 GW

# Global map of the grid and of its interconnections

Interconnectors with:

- Germany
- Czech Republic
- Hungary
- Slovenia
- Italy
- Switzerland

## Grid facts and characteristics

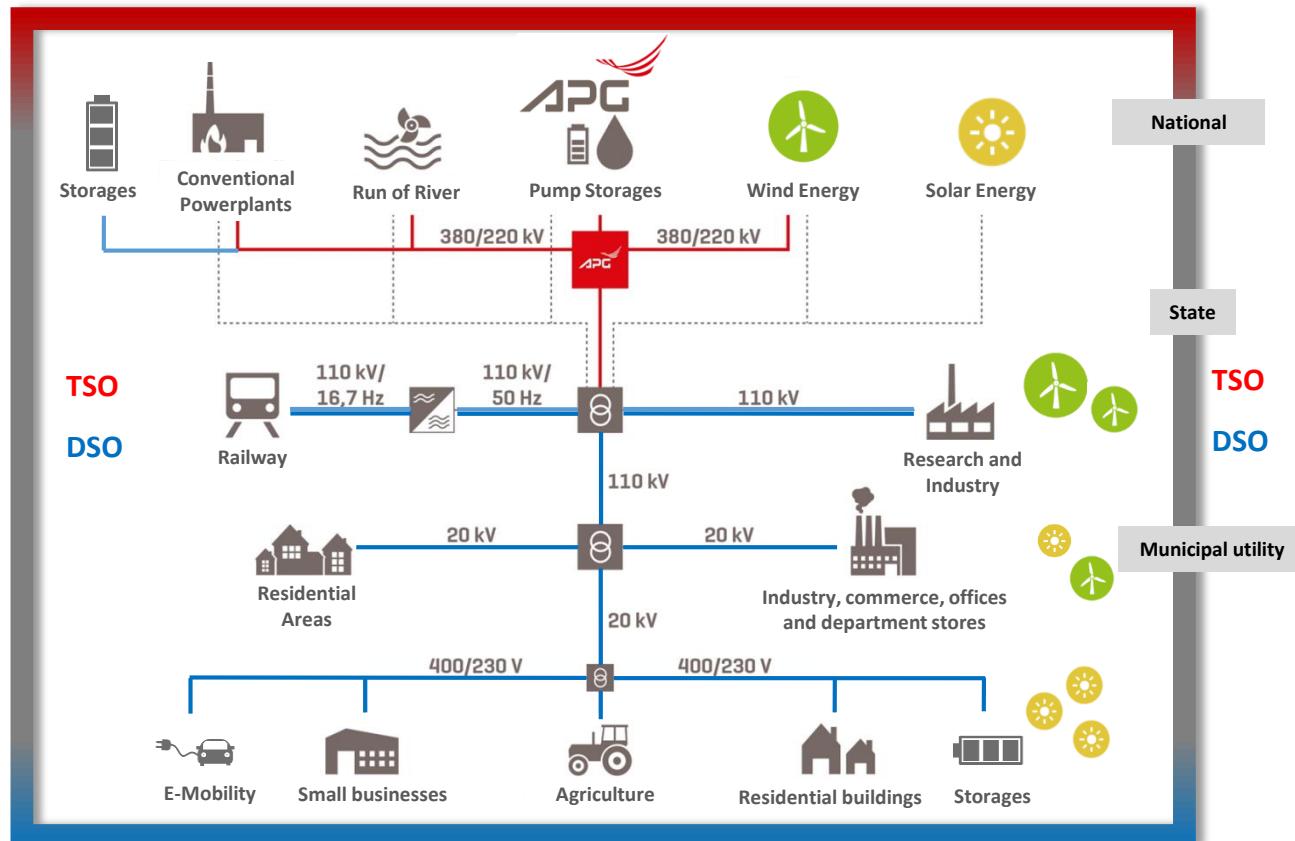

The high voltage electricity grid in Austria consists of the voltage levels 380 kV, 220 kV, 110 kV and medium voltage

Voltage Level	Total length (system length in km)
380 kV	3.051
220 kV	3.714
110 kV	11.435
1 kV to 110 kV	69.062
1 kV and below	173.369

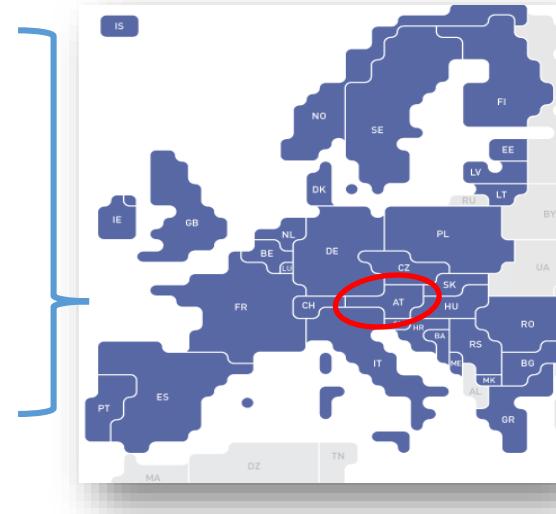

*as of 31.12.2016*

# Structure of electrical power system

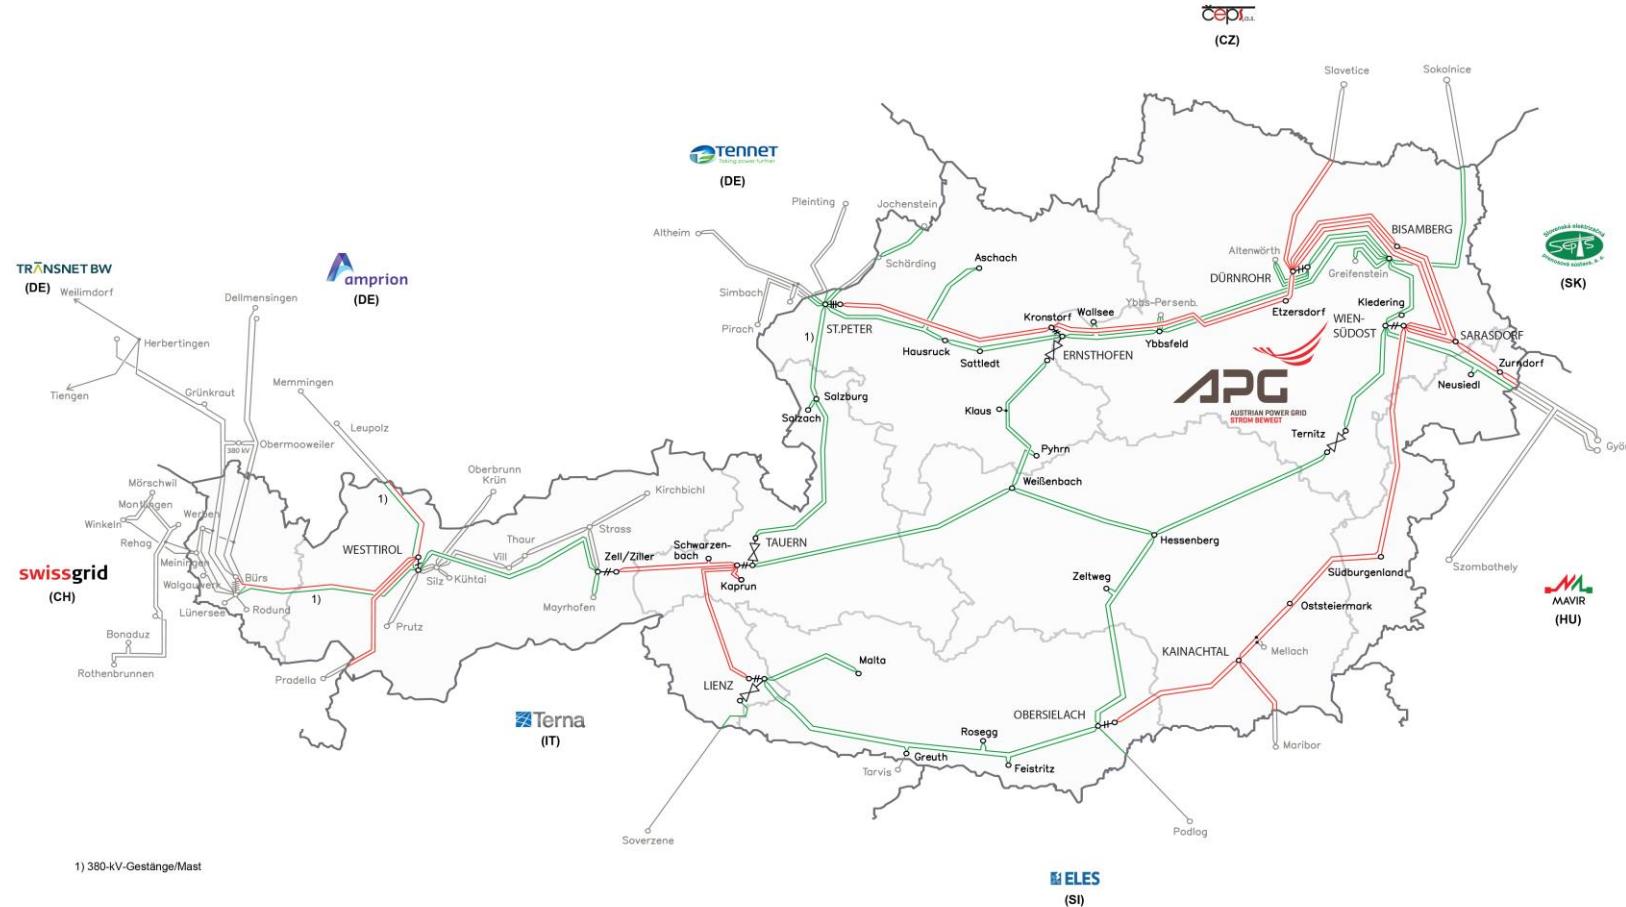

## Vertical - national

## Horizontal - international

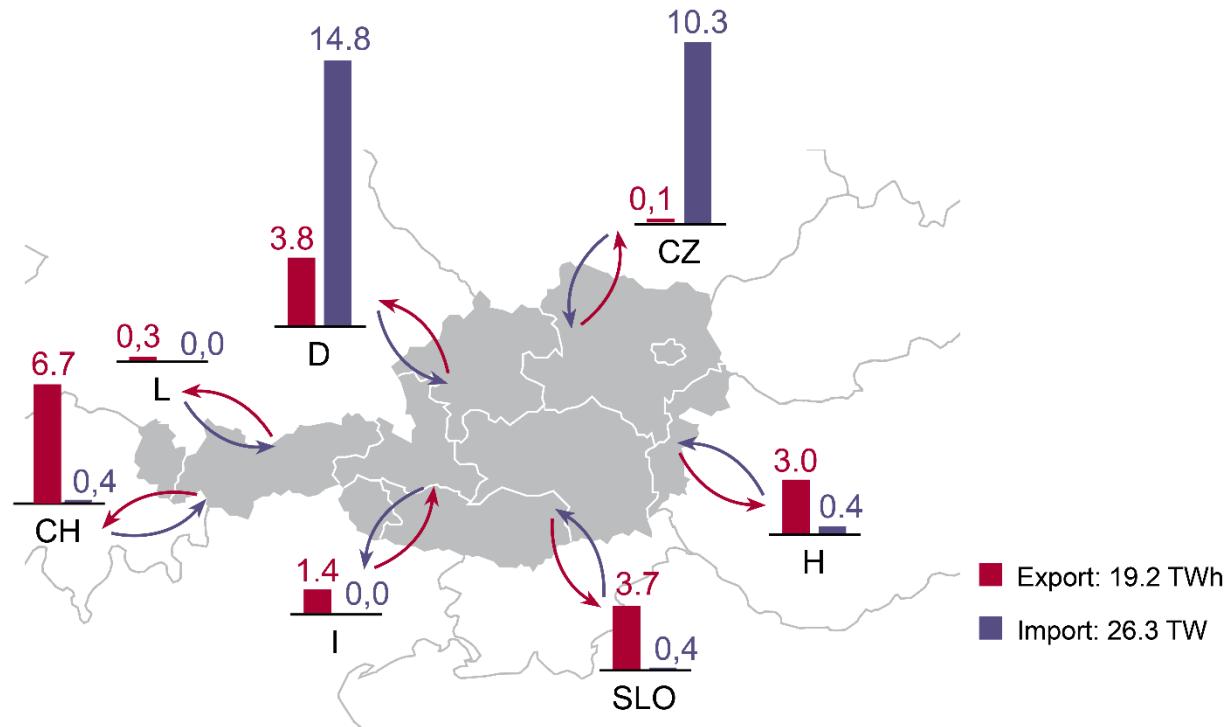

# The Austrian transmission grid, located centrally within ENTSO-E's grid and Europe

# (physical) exchange with neighbouring countries

Physical energy exchange between Austria and its neighbouring countries in 2016 in TWh

Source: E-Control 2017, adapted presentation

# Austrian Power Grid AG, Key Facts and duties

## APG is a regulated enterprise:

- Sales revenues\*: € 777 million
- Total Assets\*: € 1.578 million
- Yearly Investments: € ~250 million

## APG is solely responsible for

- secure and reliable system operation
- grid enforcement and development
- market facilitation and integration
- forecast and balancing the Renewable Energy Production

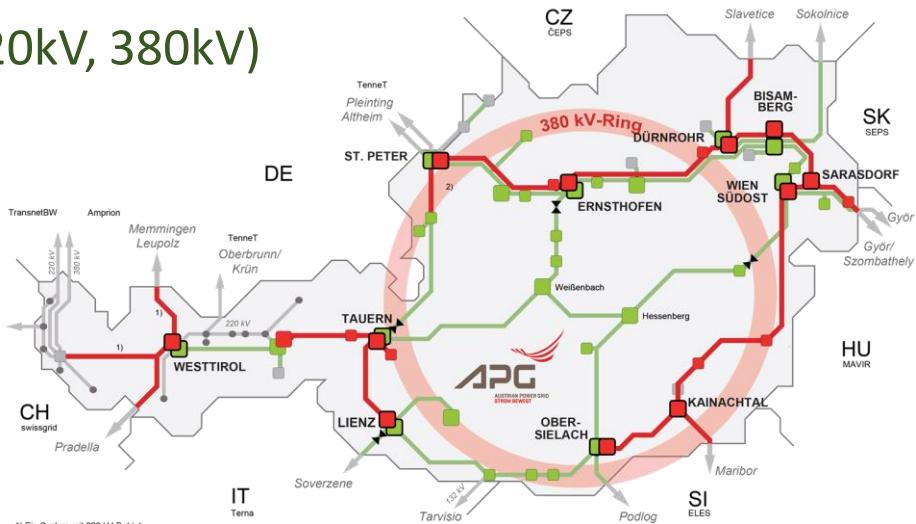

## APG is a full and active member of ETSO-E, the European Network of Transmission System Operators for Electricity.

\* Figures from 2017 Annual Report.

- Austrian Transmission System Operator
- unbundled & regulated enterprise
  - ✓ secure and reliable system operation
  - ✓ grid enforcement & development
  - ✓ market facilitation & integration
  - ✓ forecast & integration of Renewable Energy production

- 3.500 km length of lines (110kV, 220kV, 380kV)
- 473 employees
- € 1.578 Mio. Assets
- € 250 Mio. investments per year
- 100% owned by Verbund, Austrian Electricity law § 28, ITO
- Member of ETSO-E

## Cooperation of TSO and DSOs

- ❑ In Austria TSO and DSOs have a very good historical basis and close cooperation (grid restoration, grid planning...)
- ❑ New challenges for TSOs and DSOs
  - Renewable integration
  - Congestion management
  - Neutral market facilitator
- ❑ Requirement for enhancement of cooperation
  - Data exchange
  - Knowledge sharing

# Power structure of the country

- Pumped storage (~ 8.400 MW)
- Thermal power plant (~ 6.750 MW)
- Wind power plants (~ 2.750 MW)
- Solar power plants (~ 1.050 MW)
- Run of river power plants (~ 5.700 MW)

# CO2 Emissions in Power Generation

## Specific CO<sub>2</sub> emissions 2013

Data in g/kWh

	Greece	869	intensive Ø 700 g/kWh
	Netherlands	550	
	Germany	468	
	Denmark	464	
	UK	443	
	Italy	404	
	Portugal	325	
	Spain	258	
	Belgium	200	
	Finland	190	moderate Ø 200 g/kWh
	<b>Austria</b>	<b>167</b>	
	France	50	low < 50 g/kWh
	Sweden	16	

Remark: Countries with a high share of CHP might have higher specific CO<sub>2</sub>-emissions. This is due to the fact that the emissions for heat production are included in the figures.

Source: Eurelectric, Power Statistics 2013; Technik: Well-to-Wheel, Umweltbundesamt GmbH

## Development of specific CO<sub>2</sub> emissions (EU, Austria)

The European power sector continues its trajectory in reducing CO<sub>2</sub>-emissions:

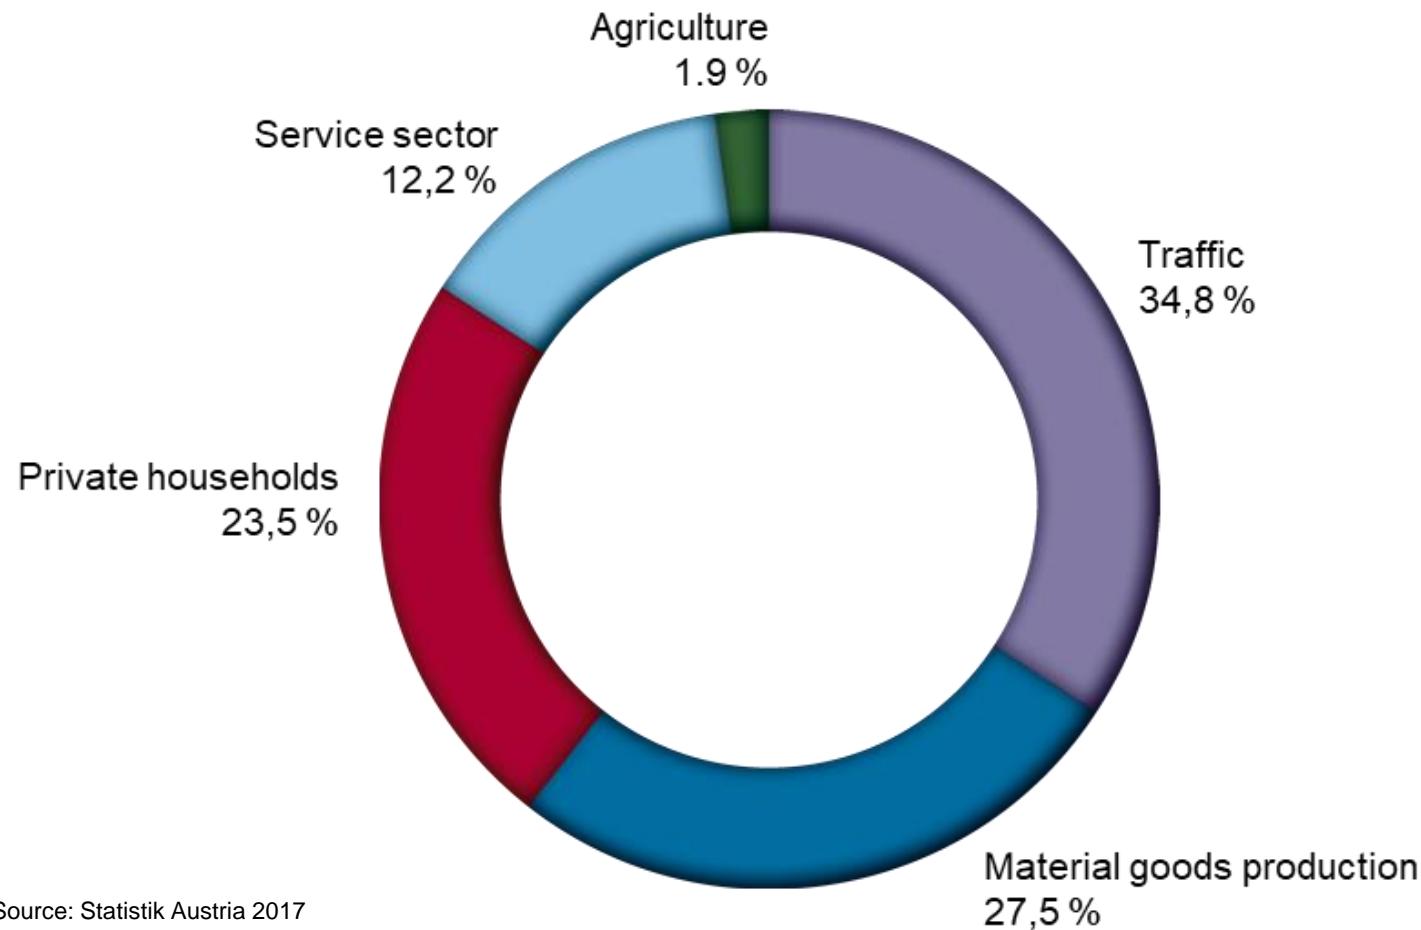

- 1990: 500 gCO<sub>2</sub>/kWh
- 2014: 331 gCO<sub>2</sub>/kWh [- 33,8%]

Austria belongs to the frontrunners, regarding the trajectory in reducing CO<sub>2</sub>-emissions in the production of electricity (incl. CHP)

- 1990: ~ 170 gCO<sub>2</sub>/kWh
- 2015: ~ 105 gCO<sub>2</sub>/kWh [-41,1%]

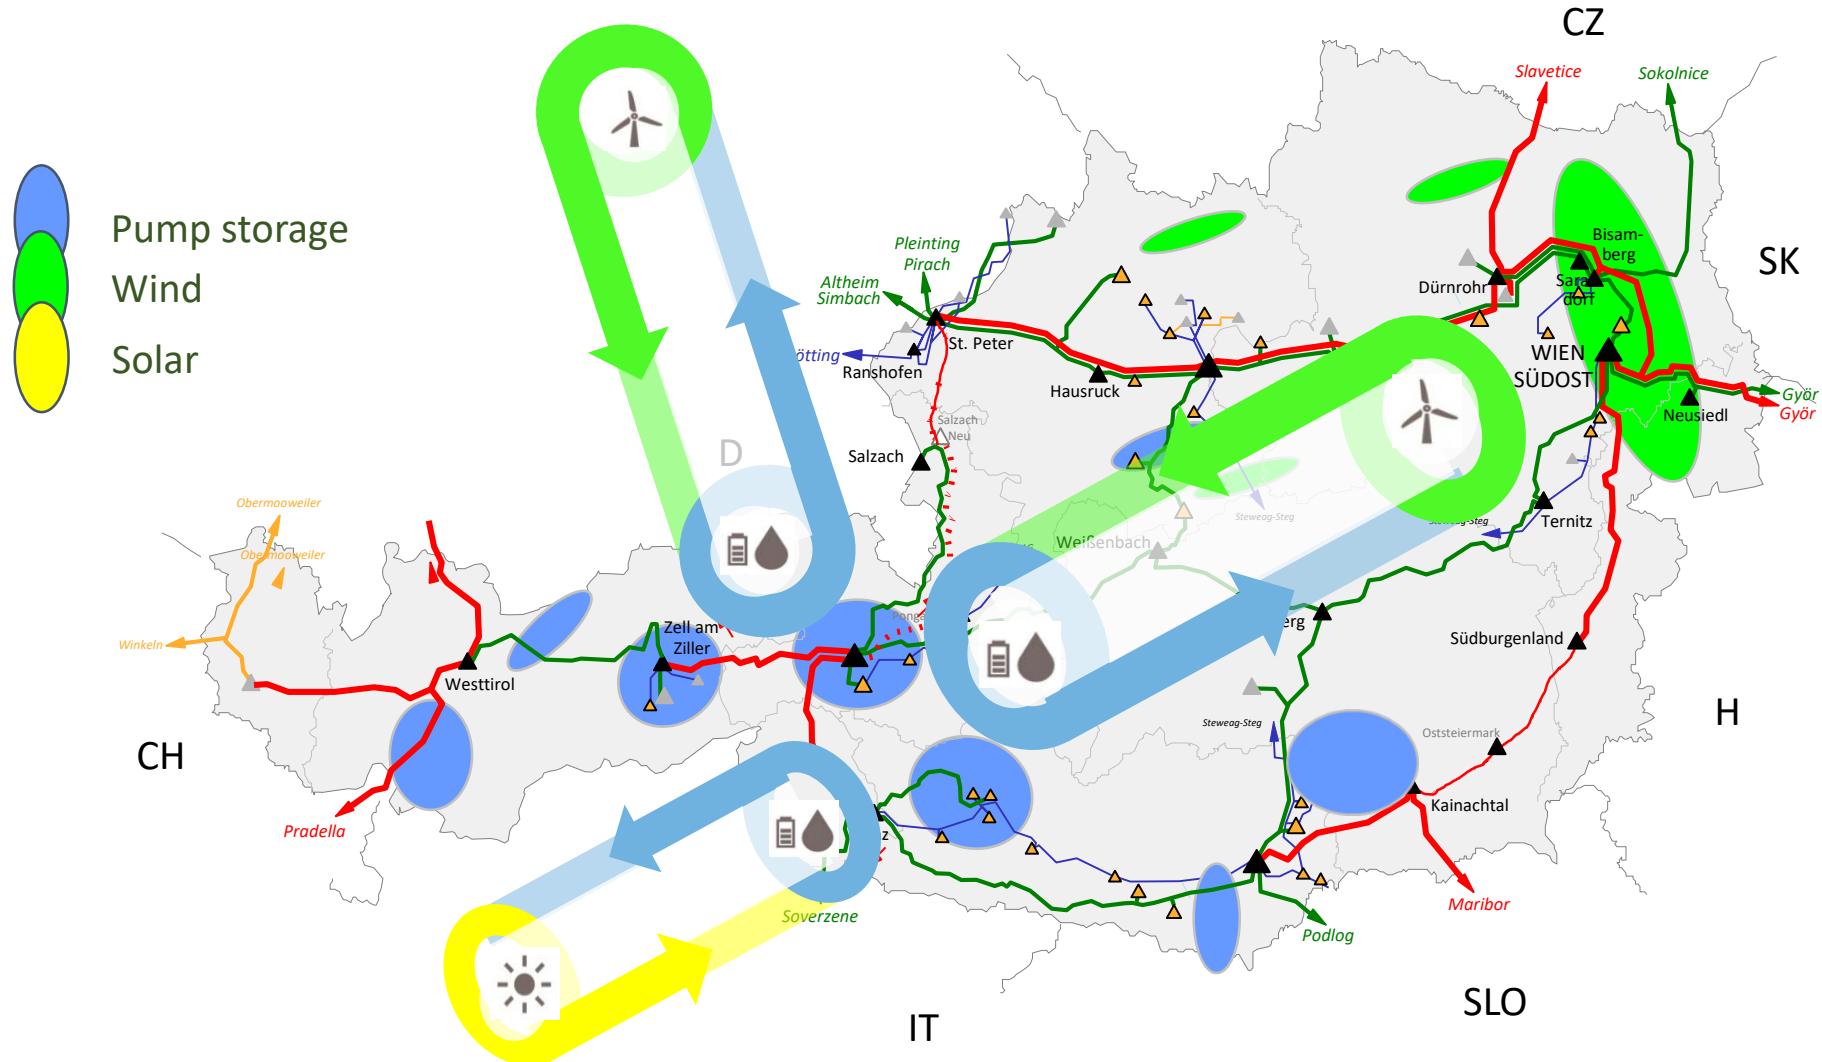

Source: Eurelectric „Power Facts 2016“, Umweltbundesamt „Klimaschutzbericht 2017“, own calculations

## Comsumption per customer groups

Source: Statistik Austria 2017

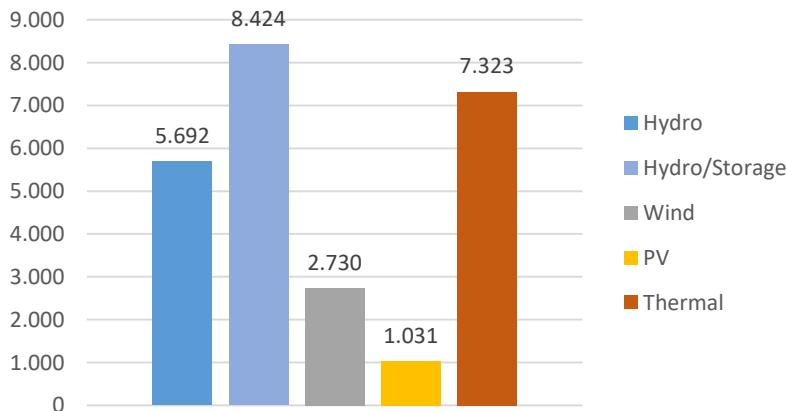

# Austria as an electricity hub

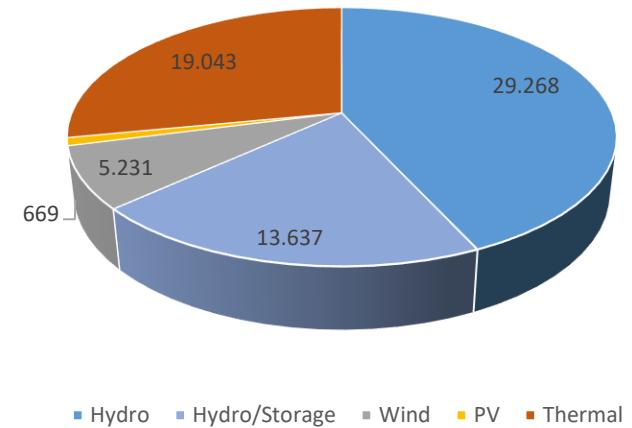

# Installed capacity and production in 2016

installed capacity: ~ 25,2 GW  
maximal load: ~ 10,4 GW

Installed Capacity Austria in MW

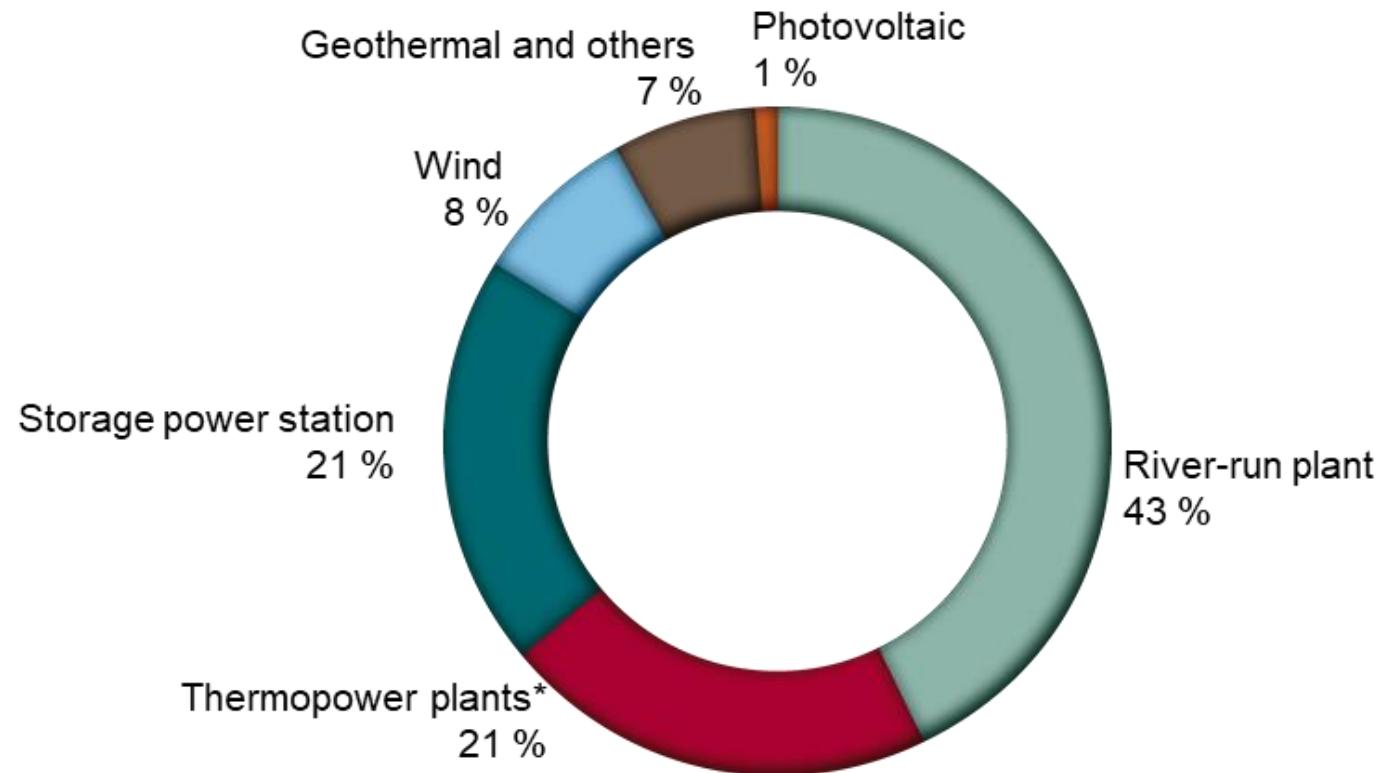

Produced Energy Austria in GWh

source: E-Control

# Power production structure

Domestic production: 67.881 GWh

Source: Oesterreichs Energie, E-Control 2017

\* Thermal power plants including biogenic fuels

## Power balance in 2016

- Generation (TWh) → 67,9 TWh
- Consumption (TWh) → 61,8 TWh
- Imports (TWh) → 26,3 TWh
- Exports (TWh) → 19 TWh
- Losses (TWh) → 3,2 TWh
